Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
```

```
SUBCELULAR LOCATION: Integral membrane protein.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1/GLYT-1A/GLYT-2 (SHOWN HERE)
AND Z/GLYT-1B/GLYT-1; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: GLYT-1A IS FOUND IN THE GREY MATTER OF CNS AS
WELL AS IN MACROPHAGES AND MAST CELLS IN PERIPHERICAL TISSUES.
GLYT-1B IS ONLY FOUND IN THE WHITE MATTER OF CNS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (Rel. 24, Last sequence update)

Mol. Pharmacol. 45:608-617(1994).

-I- FUNCTION: Terminates the action of glycine by its high affinity sodium-dependent reuptake into presynaptic terminals. May play sodium-dependent reuptake into presynaptic terminals. May play in role in regulation of glycine levels in NMDA receptor-mediated neurotransmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- SUBCELLULAR LOCATION: Integral membrane protein.

May play role in regulation of glycine levels in NMDA receptor-mediated neurotransmission (By similarity).

SUBCELLULAR LOCATION: Integral membrane protein.

ALTERNATIVE PRODUCTS: 3 isoforms; 1/GLYT-1B (shown here), 2/GLYT-1A and 3/GLYT-1F; are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea; Bovidae; Bovinae; Bos.

-!-FUNCTION: TERMINATES THE ACTION OF DODAMINE BY ITS HIGH
AFFINITY SODIUM-DEPRINENT REUPTAKE INTO PRESYNAPTIC TERMINALS.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- MISCELLANBOOR: THIS PROYDEIN IS THE TARGEF OF PSYCHOMOTOR
STIMULANTS SUCH AS AMPHETAMINES OR COCAINE.
-!- SIMILARITY: BELONGS TO THE SODIUM:NEUROFRANSMITTER SYMPORTER

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
